

Unit 6: My predictions

There are too many reasons to be optimistic about the future. However, we will have some serious problems.

On the one hand, life will be easier. In schools, all the classrooms will have digital boards and the students will use technologies. For free time, we will find all that we want on the Internet. We will see all the films in 3-D. I'm sure that technologies will make our free time easier.

On the other hand, we might have some problems. In schools, students won't know how to do many things without computers. For free time, we won't have too many problems.

In conclusion, the world will be far of perfect in 2050, but it might be better.

UNIT 6: LIVING SPACE.

There are good reasons to be optimistic about the future. I think the world will be different and better, however, there will still be wars and conflicts.

On the one hand, life will be perfect because there will be more devices and machines that will solve our problems. It will be easier because

everybody will speak the same language.

On the other hand, there will be a lot of changes in our planet due to global warming. Rich people will despise poor people, and there won't be hungry people.

In conclusion, the world will be as people want it to be, if we take care of the environment, our future will be better than now.

UNIT 6: MY PREDICTIONS

There are good reasons to be optimistic about 2050. We will solve some problems because science will be very advanced and I'm sure that people will save the planet.

On the one hand, in the school, all the teachers with robots will speak English very well and the students will have new possibilities to learn other languages.

Concerning entertainment, we will play with technology and more exciting games than the games of now, however the typical games of table will continue existing.

About free time, we will have more free time because there will be robots or digital homes that will do the washing-up, cook and other house-work. People will have time to devote to their hobbies.

On the other hand, we'll have some serious problems. In the schools, the teachers will take classes from their houses and the communications between teachers and students will disappear.

In relation to entertainment, the children will be busy with the computers and this is very bad for them.

About free time, people will have a lot of free time and they will get bored.

In conclusion, life in 2050 will be better in some aspects but in other aspects, life will be bad.

Date: Osna, 23th, March, 2012

Level: 3^o-B

UNIT 6 My predictions

In 2050, I'm sure that people will be happier than now. They may do a lot of things and activities and they won't be bored. Also they will have good jobs because the school will be easier than now. However there are disadvantages and some problems that people must solve so that 2050 will be a good year.

On the one hand, people may have more studies than now, and therefore they will investigate and they will study serious problems like climate change, pollution on the Ocean layers. They will be capable of invent machines, electric cars, flying objects... with all these things, they will have a good time and they will reduce pollution.

On the other hand, scientists and those persons with studies will be very busy inventing new machines and technologies, for that they need a lot of money and time, and they won't realize basic activities, but more important for the community like the medicine, common transports...

In conclusion, we will have some serious problems in 2050, related to medicine, however the atmosphere problems will be solved. In 2050, people will live better than now.

My predictions

There are good reasons to be optimist about 2050. However, we will have to solve some problems.

On the one hand, I'm sure that life will be easier. In the school, we will write on tactile computers and the teacher will teach on a tactile board.

In our free time, we will play with technological objects, as robots, bikes that fly... and we will entertain much.

On the other hand, we might have some serious problems. If we don't take action, the climate will continue to change, and we might not have enough food or water.

In conclusion, the world will be far from perfect in 2050, but it might be a better place that it is now.

Unit 6: My predictions

There are good reasons to be optimistic about 2050. However, we will have to solve some problems.

On the one hand, I'm sure that scientists will invent cure for all diseases, and technologies will be far more advanced than today.

On the other hand, we might have some serious problems. Pollution will continue to grow, climate change will affect food and there will be little food.

In conclusion, the world will be far from perfect, because, although scientists may invent vaccines, contamination is more important.

Name: Mar Serrano Montero

Class: 3^oC

Date: 22th March 2012.

Unit 6: Schools, free time and entertainment in 2050.

There are good reasons to be optimistic about 2050. I'm sure that everything will be computerized. However, we will have some serious problems.

On the one hand, I'm sure that will do almost everything with computers so we will cut down less trees for paper. In schools we won't have to bring books and notebooks because we will have computers, digital boards, more modern than now. Teenagers, and other generations will be hooked on the computer, video games and other new devices. When people go out for fun, there will be electric devices everywhere.

On the other hand, we might have some serious problems with hackers. If nowadays we have a lot of hackers, in the future I'm sure we will have many more. In my opinion, in schools the students will learn less than now. Teenagers in their free time will only want mobile phones, video games, computers... and they will forget some things like going to the park for play or going to the countryside with bikes... they will relate by social networks. Libraries might disappear.

In conclusion, the world might be a better place to live in but in my opinion more boring. The world will be far from perfect in 2050.
